The publisher regrets that table 4 in Protoplanetary disc truncation mechanisms in stellar clusters: comparing external photoevaporation and tidal encounters (doi:10.1093/mnras/sty984) published with percentages given in incorrect columns. This has now been corrected online.

**Table 4.** The fraction of discs which did not undergo a close encounter ( $x_{\min}/R_{\text{out}} < 2$ ) over 3 Myr in each model.

Model	A	B	C	D	E	F
No close enc.	32%	0.8%	11%	0%	40%	1.4%
