

This survey explores the education and training available on scholarly communication issues for students and practitioners. For the purposes of this survey we are defining scholarly communication as the process by which academics, scholars and researchers share and publish their research findings with the wider academic community and beyond. This includes, but is not limited to, areas such as open access and open data, copyright, institutional repositories and research data management.

All responses will be anonymous and any identifying information will be removed from the data sets as soon as possible after collection. The results of this study will be written up for publication aimed at a general readership. The authors will also make the datasets available. This will be done at an individual question level but not across responses to avoid participants being identified.

Continuing with this survey indicates acceptance of these terms. Participants can withdraw from the survey at any time by emailing info@osc.cam.ac.uk with their request.
